ABOUT COMPANY

Krantecq Solutions Private Limited is a legally incorporated Private Limited technology company, established to deliver software development, digital transformation, automation, and IT-enabled business solutions. The company was incorporated on 23 December 2022 and is registered with the Registrar of Companies, Patna under the Corporate Identification Number U72900BR2022PTC060737.

As a Non-Government Private Limited Company, Krantecq Solutions operates with a structured corporate foundation and a clear focus on building reliable digital products for startups, SMEs, service providers, manufacturers, and growing businesses. The company's legal registration reflects its commitment to professional operations, long-term business credibility, and transparent service delivery.

Vikrant Kumar Singh
Director, CEO

DIRECTOR'S PROFILE

Vikrant Kumar Singh is the Director of Krantecq Solutions Private Limited and leads the company with a strong focus on custom software development, business automation, mobile applications, SaaS platforms, and full-stack digital product delivery.

His work is centered around building technology that solves real operational problems. From consultation platforms and live streaming systems to corporate catering apps, kitchen automation software, offline billing systems, inventory management tools, e-commerce platforms, and enterprise dashboards, he has been actively involved in planning and delivering digital systems that help businesses reduce manual work and operate with better control.

Under his leadership, Krantecq Solutions has grown into a 50+ member technology team with a 12-member core team focused on planning, development, delivery, quality, and client success. His vision is to position Krantecq Solutions as a reliable technology partner for startups, SMEs, manufacturers, service businesses, and growing brands looking to move from manual operations to scalable digital systems.

OUR VISION

Vision 01

To become a trusted technology partner for businesses that want to move from manual operations to intelligent, scalable, and automated digital systems.

Krantecq Solutions envisions a future where startups, SMEs, manufacturers, service providers, and growing brands can run their operations with better speed, accuracy, and visibility through custom-built software. Our goal is to make technology practical, accessible, and result-driven for businesses of every size.

Vision 02

To build digital products that do more than support businesses, they help businesses grow, scale, and create new revenue opportunities.

We aim to deliver websites, mobile apps, SaaS platforms, ERP/CRM systems, desktop software, e-commerce platforms, and automation solutions that become a core part of our clients' growth journey. Our vision is to turn business ideas into reliable digital ecosystems that create long-term value.

OUR MISSION

MISSION 01

To help businesses replace manual operations, Excel-based tracking, paper records, and scattered communication with custom-built digital systems that improve speed, accuracy, visibility, and control. At Krantecq Solutions, our mission is to build software that solves real business problems. Whether it is a mobile app, website, SaaS platform, ERP/CRM system, desktop software, or automation tool, every solution we create is designed to reduce workload and make business operations more efficient.

MISSION 02

To become a long-term technology partner for startups, SMEs, manufacturers, service providers, and growing brands by delivering scalable, secure, and practical digital products. We focus on understanding how a business actually works before building the system. This allows us to create solutions that support real users, automate repetitive tasks, improve decision-making, and help businesses scale with confidence.

OUR SERVICE

01. WEBSITE DEVELOPMENT

We build professional, responsive, fast, and SEO-friendly websites that help businesses create a strong online presence and generate customer trust. Our website development services cover business websites, corporate websites, landing pages, service websites, portfolio websites, custom web portals, and CMS-based platforms. Every website we build is designed with clean UI, mobile responsiveness, strong performance, clear content structure, lead-generation focus, and scalable architecture. Our goal is to make websites that not only look modern but also support business growth, branding, and customer conversion.

02. MOBILE APP DEVELOPMENT

We develop custom Android, iOS, and cross-platform mobile applications for startups, businesses, service providers, and growing brands. Our mobile apps are built with a smooth user experience, secure backend integration, scalable APIs, payment support, push notifications, and performance-focused architecture. From customer-facing apps and booking platforms to consultation apps, e-commerce apps, delivery apps, employee apps, and business automation apps, we create mobile solutions that make business services more accessible, organised, and easy to use.

OUR SERVICE

03. SAAS DEVELOPMENT

We build scalable SaaS platforms for startups and businesses that want to launch subscription-based, cloud-powered, and multi-user digital products. Our SaaS development services include MVP development, multi-tenant architecture, admin dashboards, user management, subscription systems, analytics, billing flows, and cloud-ready backend systems.

Our focus is to help founders and businesses turn software ideas into reliable products that can grow with users, features, teams, and revenue. We design SaaS platforms with security, scalability, usability, and long-term product growth in mind.

04. CUSTOM SOFTWARE DEVELOPMENT

We create custom software solutions for businesses that cannot depend on ready-made tools or generic platforms. Our custom software development services cover internal tools, admin panels, business portals, booking systems, management software, workflow platforms, reporting systems, inventory tools, and API-based applications. We first understand how the business actually works, then build a system around its real workflow. This helps businesses reduce manual work, improve data visibility, avoid errors, and manage operations from one centralized digital platform.

OUR SERVICE

05. ERP & CRM DEVELOPMENT

We develop ERP and CRM systems that help businesses manage teams, customers, orders, inventory, billing, operations, communication, and reports from a single platform. These systems are useful for businesses that need better control over daily operations and customer relationships.

Our ERP/CRM solutions can include role-based dashboards, customer records, sales tracking, employee management, order management, inventory control, payment tracking, reports, notifications, and department-wise workflows. We build these systems to improve decision-making, coordination, and operational efficiency.

06. BUSINESS AUTOMATION SOLUTIONS

We help businesses replace repetitive manual tasks, Excel sheets, paper records, WhatsApp-based tracking, and disconnected tools with automated digital systems. Our automation solutions are built to save time, reduce errors, improve team coordination, and give management better real-time visibility. Our automation work includes order automation, billing automation, task tracking, inventory updates, report generation, workflow management, approval systems, notifications, staff coordination, and dashboard-based monitoring. The goal is simple — help businesses operate faster, smarter, and with less manual dependency.

OUR PROJECT

ASTROBEAMS – FULL-STACK ASTROLOGY CONSULTATION & LIVE STREAMING PLATFORM

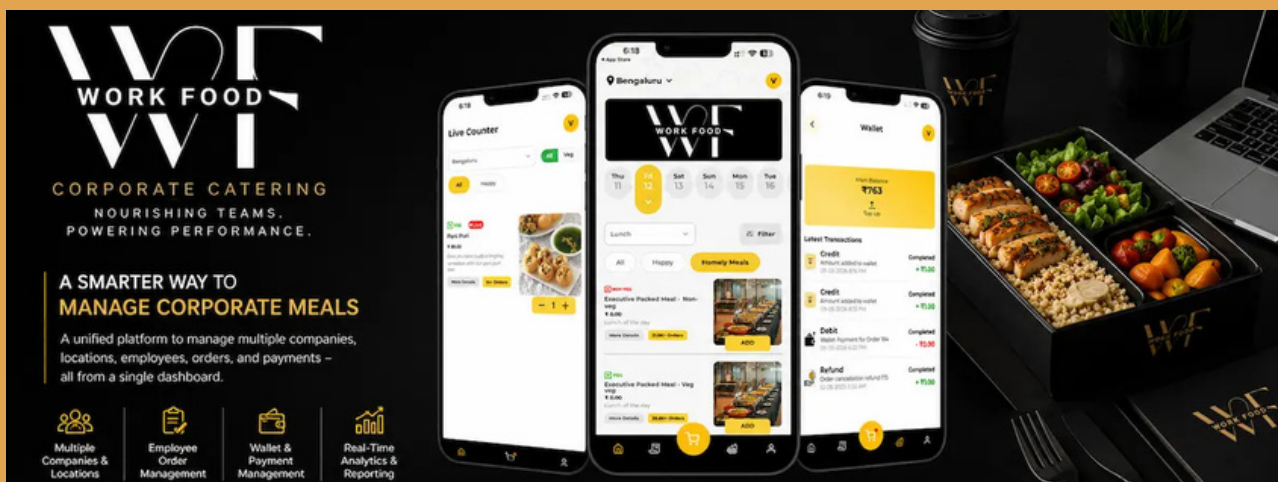

Category: Mobile App · Web Platform · Admin Dashboard · Live Consultation · E-Commerce

Astrobeams was developed as a complete digital astrology consultation ecosystem for a client who wanted to move beyond manual consultation handling and create multiple digital revenue streams from one platform. The project included a React Native mobile app, React.js web portal, admin dashboard, and Node.js backend. The platform supports RTC-based video and voice consultations, live voice calls, live streaming, virtual gifts, wallet payments, queue management, PDF astrology report downloads, referral engine, support ticketing, and a standalone e-commerce section.

A major part of the system was real-time communication. We built an in-house WebSocket chat system with typing indicators, read receipts, session-based communication, and auto-disconnect logic. The live streaming module also included user interactions such as private calls during live sessions and gift-based engagement.

OUR PROJECT

WORKFOOD – MULTI-COMPANY CORPORATE CATERING MANAGEMENT APP

Category: Corporate Catering · Order Management · Wallet System · Admin Dashboard

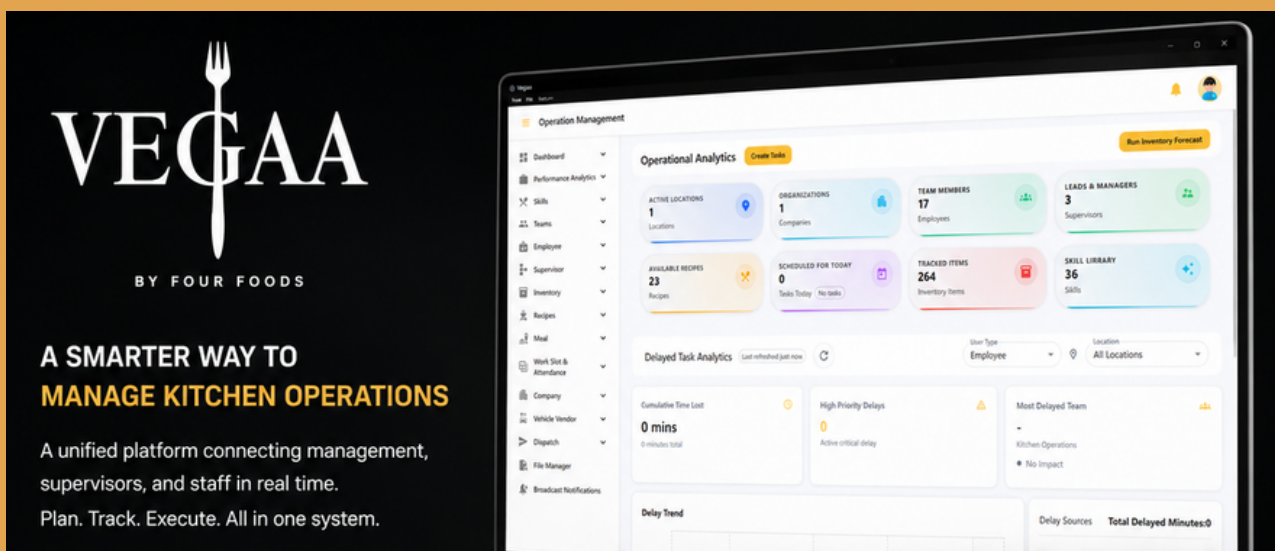

Workfood was built to solve a complex corporate catering management challenge where the client was handling food orders manually across multiple companies, locations, and employees.

The existing process was scattered, time-consuming, and difficult to track. Orders were managed through fragmented communication, creating confusion, delays, and chances of manual errors. The client needed one centralised system to manage corporate clients, employee orders, wallet transactions, deliveries, and operational visibility.

We developed a cross-platform iOS and Android mobile app using React Native, supported by a Node.js backend, React.js admin dashboard, REST APIs, and MySQL database. The system allowed admins to onboard multiple companies, manage different office locations, track employee orders, monitor deliveries, and handle wallet-based transactions.

OUR PROJECT

VEGAA – MULTI-PLATFORM KITCHEN OPERATIONS & AUTOMATION SYSTEM

Category: Kitchen Automation • Inventory Management • Desktop App • Mobile Apps

Vegaa was developed for a food production kitchen that was dependent on Excel sheets, paper records, and manual coordination between management, supervisors, and floor staff.

The client needed a centralized digital system that could connect planning, production, inventory, employees, tasks, and real-time communication. The goal was to reduce manual dependency and give management better visibility into daily kitchen operations.

We built a multi-platform system consisting of a desktop application for management using Electron.js and React.js, along with mobile applications for supervisors and employees. The system covered inventory management, batch planning, recipe management, meal planning, employee coordination, skill matrix, work slot management, task delay tracking, Excel import/export, AWS S3 file storage, and real-time WebSocket chat.

OUR PROJECT

ROBUST – OFFLINE BILLING & INVENTORY DESKTOP SOFTWARE

ROBUST
OFFLINE BILLING & INVENTORY SYSTEM
Desktop Application Built with **Electron.js**

A complete billing and inventory management solution designed for **manufacturing and trading businesses**.

- 10,000+ Products Managed
- ₹10Cr+ Annual Transactions
- GST Billing E-way Bills Label Printing

Inventory Management | GST Billing & Invoicing | E-Way Bill Generation | Label Printing

Category: Manufacturing · Billing Software · Inventory Management · Offline Desktop System

Robust was developed for a truck spring leaf manufacturing business that needed to replace a fully manual billing and inventory management process.

The business was managing more than 10,000 products across multiple order types and required a reliable software system that could run smoothly even in a low-connectivity environment. The client needed offline billing, product management, GST billing, inventory tracking, e-way bill support, and label printing from one desktop application. We built an offline-first desktop billing and inventory software using Electron.js and React.js with Windows 7 compatibility. The system was designed for manufacturing operations where speed, reliability, local access, and billing accuracy were critical.

OUR APPROACH

Discovery &
Strategy

Planning &
Design

Development
& Integration

Testing &
Support

Step 1

We understand your business, workflow, users, challenges, and goals to define the right digital solution.

Step 2

We create the product structure, user flow, modules, and clean UI/UX design for a smooth user experience.

Step 3

We build the app, website, dashboard, backend, APIs, and required integrations with scalable architecture.

Step 4

We test, launch, and support the product with improvements, maintenance, updates, and future scaling.

WHY CHOOSE KRANTECQ

Business-First Approach

We understand your business workflow before building the solution, so the final product solves real operational problems.

Custom-Built Solutions

We do not depend on generic templates. Every website, app, SaaS product, ERP/CRM, or automation system is built around your business needs.

End-to-End Development

From planning and UI/UX to development, testing, deployment, and support, we handle the complete product journey.

Long-Term Technology Partner

We support clients beyond launch with updates, improvements, maintenance, scaling, and future feature development.

GET IN TOUCH

Have an idea, project, or business process you want to digitise? Krantecq Solutions can help you turn it into a scalable digital product. Whether you need a website, mobile app, SaaS platform, ERP/CRM system, desktop software, e-commerce platform, or complete business automation solution, our team is ready to understand your requirements and guide you with the right technology approach.
